balancing

Smarter Student Transportation

The Zonar Count™ app provides school districts easy access to ridership visibility to increase student safety, balance ridership and streamline federal reporting – including Medicaid reimbursement. With Zonar Count, drivers add or subtract rider onboarding and offloading in real-time for accurate rider counts. The app collects valuable rider data which can be accessed through Zonar's [Ground Traffic Control®](#) and used to analyze routes, provide cost saving route optimization and enable real-time decision making for effective ridership management.

When combined with Zonar [Z Pass™](#), students carry a passive RFID

identification card to scan with the Z Pass RFID reader, which logs entry and exit from the bus. The date, time, and location of each scan is logged and transmitted to a secure database for immediate access through Zonar Ground Traffic Control.

Take full advantage of Medicaid Reimbursement

Take the complexity out of the data collection for special needs Medicaid reimbursement. Zonar Count electronically eliminates the need for paper and the burden of data entry. With the swipe of a card, school districts can easily and securely track special needs ridership information and generate reports to simplify the process for reimbursement claims.

Don't lose valuable district dollars you are due.

Features and Capabilities

- Immediate data transmission
- Locked while vehicle is in motion
- Simple mounting system
- Low-power sleep mode
- Web-based reporting
- Available on Zonar tablets
- Card management services

Z Pass Hardware

- RFID Reader
- Passive RFID cards
- 4.2" W x 4.2" L x 1.2" H
